VM Protected

Vinchin Backup & Recovery is an easy-to-use, reliable and cost-effective next generation VM backup solution, designed to protect multi-types of virtual environment including VMware, Hyper-V, XenServer, RHV/oVirt, OLVM, XCP-ng, OpenStack, Sangfor, and Huawei FusionCompute.

Vinchin Backup & Recovery has been praised by the world's top virtualization vendors and has obtained certification including VMware Ready, Citrix Ready, Redhat certified Technology etc. Enterprises can take full advantages of the certified Vinchin backup software to protect their virtualization environment and reduce project risk.

“

We trust Vinchin because it is really a reliable and high-efficiency backup software. It not only saved us a lot time on maintenance with incredible easy-to-use console, but also is a robust "backup force" for our business system against disasters.

Mr. Lee | System Administrator
China Telecom, CHINA

Next Generation VM Backup Software

Supported environments

VMware

vSphere 4.x ~ 7.0
vCenter 4.x ~ 7.0
ESXi 4.x ~ 7.0
vSAN 6.x ~ 7.0

Microsoft Hyper-V Server

Microsoft Hyper-V 2012
Microsoft Hyper-V 2012 R2
Microsoft Hyper-V 2016
Microsoft Hyper-V 2019
Windows 10 (Desktop OS)

Hyper-V on Windows Server

Windows Server 2012
Windows Server 2012 R2
Windows Server 2016
Windows Server 2019

Citrix XenServer

XenServer 5.6 ~ 7.x

Citrix Hypervisor

Citrix Hypervisor 8.x

XCP-ng

XCP-ng 7.x ~ 8.x

Red Hat

RHV/oVirt 4.x

Oracle

Oracle Linux Virtualization
Manager 4.x

OpenStack

Mitaka and later versions +
Ceph/NetApp/Promise (as
production storage)

Sangfor

Sangfor HCI 5.x ~ 6.x

Huawei

FusionCompute (Xen based)

With the rapid growth of the data in modern world and high requirement of the business SLA, data protection becomes more and more important for most industries to concern, especially the IT companies.

Vinchin Backup & Recovery provides comprehensive data protection for virtualization infrastructure and even deep into application systems. By deploying Vinchin Backup & Recovery in your virtual environment can not only protect all your VMs but also save your budget comparing with other backup solutions.

#1 Easy-To-Use

#1 Cost-Effective

#1 Fast Support

vmware

CITRIX
XenServer

oVirt

openstack.

Red Hat

HUAWEI

ORACLE®

SANGFOR

TOP REASON TO CHOOSE VINCHIN

100% trustworthy VM backup solution

Having been tested and certified by industry leading virtualization vendors, proves Vinchin Backup & Recovery is a 100% stable and reliable and trustworthy backup software.

High Performance backup and DR

Protect your workloads in native, remote and even to the cloud via fast backup and disaster recovery with near zero business interruption.

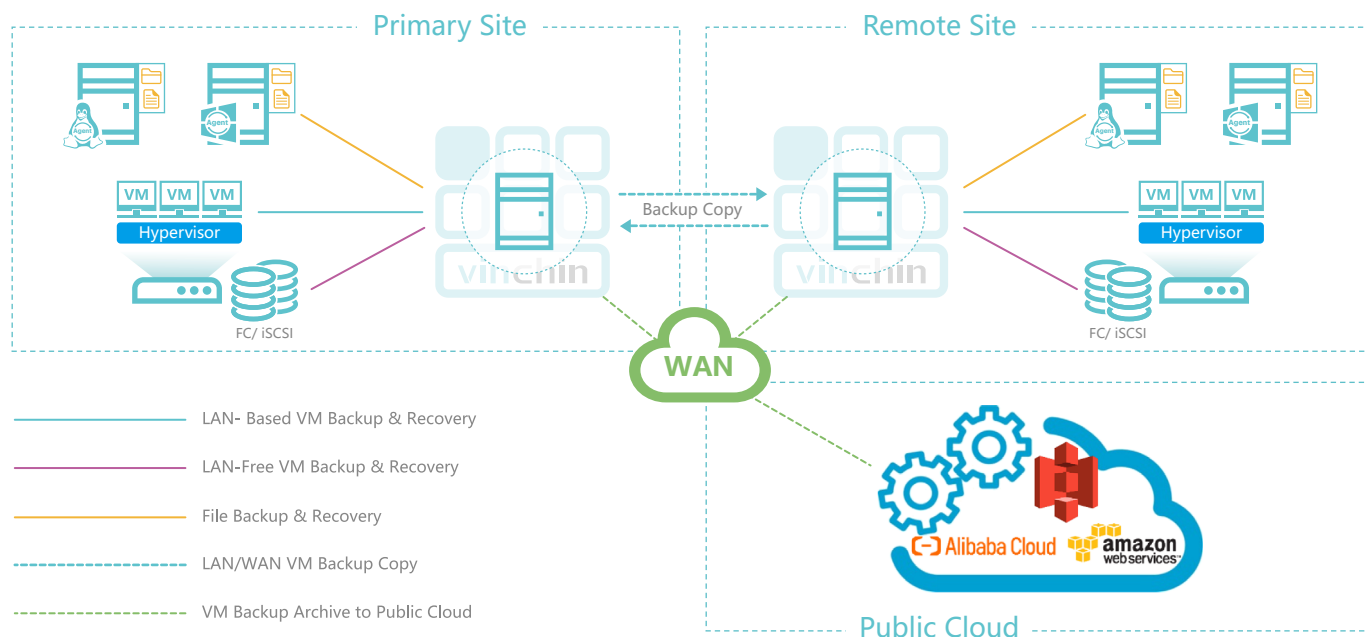

Quick response on service request

Responding any service request in 1 hour (American countries in 8 hours), 7 x 24 hours service available. Minimize user waiting time, maximize user experience fluency.

Free trial for 60 days and free pre-sale support

60 days free trial of full featured enterprise edition. Provides free installation & configuration support to customer for POC and internal evaluation test. Allows user to fully evaluate the product before buying it.

Backup & DR Architecture

BACKUP

Fast, Reliable Protection For VMs

Image Based, Agentless Backup

Back up all files, applications and OS configurations in the VM by creating an image of the entire operating system. No need to install any agent on the VM, directly protect the VM through hypervisor.

Fast incremental backup

CBT and SpeedKit™ are two technologies to achieve fast incremental backup, not only can reduce the amount of time for incremental backup, but also dramatically reduce the backup storage usage.

LAN-Free backup and recovery

Data can be directly transferred between production storage and backup storage via LAN-Free path (FC, iSCSI, NFS, CIFS storage area network) without affecting production network load.

Smart Backup Strategy

You can set up full backup, (forever) incremental backup and differential backup by daily, weekly and monthly to comprehensively protect your critical data, and also reserve your backup files with flexible retention policy.

Multithreading Transmission

When performing a backup or restore job, Vinchin backup & Recovery server will create multiple threads for data transmission of a single job, to greatly improve the overall processing speed during backup and recovery.

Save Backup Storage Space

Data will be deduplicated and Compressed before writing to the backup storage, to reduce backup size. BitDetector™ excludes swap files, partition gap and unpartitioned space during backup.

RECOVERY

Instant VM Recovery

Minimize Your RTO | Guarantee Your Business Continuity

By using Vinchin Backup & Recovery, you can instantly recover the entire VM and all its data from any restore point (no matter it's a full backup, incremental backup or differential backup) without any effectings on the original backup data. Any deduplicated or compressed backups can be recovered. It is an excellent solution to ensure business continuity, minimize the loss of crucial business interruption caused by disaster or system failure.

- **Recover TB size VM in 15 secs**
- **All business recovery in 2 mins**
- **Apply to any Vinchin supported virtual platform**

You can also quickly verify the backup data availability by instantly recover target VM to an isolated area in a matter of minute. Make sure when real disaster occurs, all the VMs can be recovered and data inside is not lost or damaged.

Full VM Recovery

When any damage or mistaken-delete happens to the backed up VM, you can restore it from multiple points in time rather than just 'the latest backup'. Besides, you can choose to restore single or a group of VMs to the original host or other specified host.

File Level Recovery

Restore single files inside the VM via Granular Restore feature. With Vinchin Backup & Recovery, user no longer needs to restore entire VM to get specific files, instead, just a few clicks can easily find the target file from the VM backups and restore it quickly.

Powerful Offsite & Cloud DR

Remote Site / Branch Office

You can copy your backup data to remote DR center, or copy your branch office's backup data to HQ using Vinchin Backup Copy. When any disaster occurs to your primary production site, you can directly use the offsite backup copy to recover the VM to offsite production system.

You can also transfer back the well protected backup copy from offsite to onsite, and recover the VM to onsite production system.

Public Cloud

You can archive the local backup file to cloud object storage for long term retention and DR with Vinchin Backup Archive. In case the primary backup got destroyed together with production data, you can transfer back the VM data from archived backup file in the cloud and restore to onsite production system. Vinchin Backup & Recovery supports AWS S3 and AlibabaCloud as cloud archive destination.

High Scalability

Distributed Backup Infrastructure

For large-scale virtual environments, a distributed backup infrastructure deployment with Vinchin Backup Server and Node(s) can be used to decentralize the workloads of overwhelming backup and recovery tasks. The number of backup nodes can be deployed as per your requirements, and this will not add any extra license fee expenses to your backup and recovery solution.

Compatible with Diverse Storage

Basing on fully considering the complexity of the user environment, Vinchin Backup & Recovery is compatible with diverse backup storage types including Partition, Local Disk, Local Directory, Logical Volume, NAS (NFS, CIFS) and SAN (Fiber Channel, iSCSI). Meanwhile, deduplication appliances are integratable on Vinchin.

File Backup

Supported Environment

Besides backing up virtual machines, you can also back up files in your Windows and Linux server using Vinchin Backup & Recovery. With a lightweight file backup agent installed on the target operating system, files inside the server can be backed up and restored easily.

Not only individual files, folders and the subfolders and files inside the folders are all supported for backup and restore.

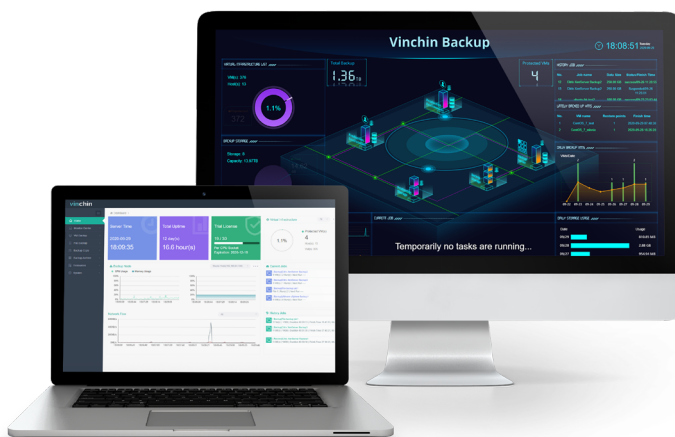

#1 Easy-To-Use Web Console

Easy To Monitor

Modern designed dashboard and Data Visualization helps to monitor all VM backup and recovery related status, e.g. VM protection and storage usage, current/history job running status, backup server/node CPU & memory usage as well as network flow status.

Easy To Manage

B/S architecture allows you to access to the web console from any where at any time. All backup, restore, copy and archive tasks are configured and performed within this single pane of glass, management can be as easy as expected.
